OCTOBER 2014 SPECIAL

Savin SP C730DN LED Color Printer

Savin is proud to introduce the SP C730DN, a space-saving A3 (11" x 17") color network printer that is the first product in Savin's impressive color printer line-up to incorporate light-emitting diode (LED) technology. Offering exceptional full-color and monochrome image quality, smaller footprint, and ultra-quiet operation, the 32-ppm SP C730DN is the perfect combination of form and function. Designed for intuitive operation and media versatility, this robust mid-volume workhorse printer sets a new standard.

With standard Gigabit Ethernet, USB 2.0 and USB Host interfaces, 533 MHz processor, and a wide array of eco-friendly functionality, the SP C730DN delivers exceptional throughput speeds *and* economy. Network-ready, the SP C730DN's large in-line paper supply of 350 sheets (expandable to 1,850 sheets) handles heavy workloads with minimal interruption. Whether the job is full-color or black-and-white, users are assured of precise text and graphic registration for clear, crisp prints. Minimal waste means low cost-per-page factors. And automatic color calibration, in one operation, makes it easy to optimize color quality.
